2023-25

# Project Overview

- Wize is an AI-driven hiring platform designed for **recruiters and students**.
- It simplifies the recruitment process by using AI to **match students with job opportunities** based on skills, experience, and preferences.
- The platform enhances **efficiency, transparency, and accessibility** in the hiring process.

# Technologies Used

- **Frontend:** Flutter (Cross-platform mobile app)
- **Backend:** Node.js / Firebase
- **AI/ML:** Python (for resume parsing and job matching)
- **Database:** Firestore (NoSQL DB)
- **Version Control:** Git & GitHub

# Work Process Timeline

## Week/Phase

Week 1

Week 2

Week 3

Week 4

Week 5

Week 6

Week 7

Week 8

## Task Completed

Understanding product vision & user needs

Created wireframes and UI designs

Started Flutter mobile app development

Integrated Firebase authentication

Built student & recruiter dashboards

Integrated resume upload and preview

Connected backend API for job matching

Implemented AI job suggestions (in progress)

# Modules Developed

- **Authentication Module** (Firebase): Signup/Login for students & recruiters.
- **Student Dashboard**: Profile creation, resume upload, job suggestions.
- **Recruiter Dashboard**: Job post creation, applicant tracking.
- **Job Matching Engine**: (Under development) ML model to match skills and jobs.

# Tools & Platforms

- **VS Code / Android Studio** – Development IDE
- **Git & GitHub** – Version control and code sharing
- **Figma** – UI/UX design
- **Trello / Notion** – Task tracking and planning

# Current Status

- ✓ Authentication & dashboards working
- ✓ Resume upload & parsing UI ready
- ⚙️ AI-based job matching under development
- 🔄 Continuous testing and integration in progress

# Next Steps

- Complete AI job matching module
- Add job recommendation history for users
- Implement recruiter interview scheduling feature
- Finalize frontend and connect with backend APIs

# Thank You
